### Real GDP growth

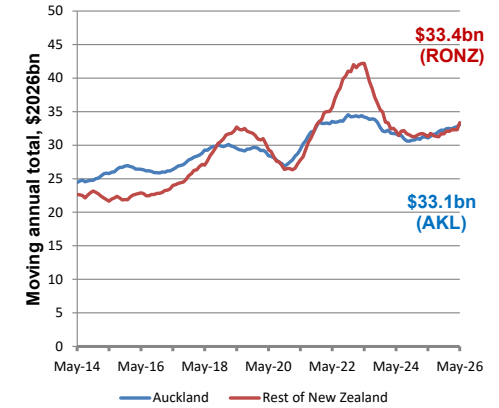

### Real retail sales growth

### Real weekly rent

### Real imports by seaports

Auckland's real\* Gross Domestic Product (GDP) for the year ended March 2026 was 0.2% higher than for the year ended March 2025; in the rest of New Zealand, the annual change was a 0.6% rise (see notes). Both growth rates: continued the improvements since June; were still barely positive yet; were below most of 2010 to 2024; were a little above their 2020 (Covid) troughs.

Real\* retail sales for the year ended March 2026 were 1.3% higher than for the year ended March 2025; in the rest of New Zealand, the annual change was a 1.7% rise. Both growth rates continued the improvements of the last eighteen months, in contrast to the falls from 2021 to 2024. They are still quite modest despite population increases, so not yet returned to the pre-Covid levels of at least 2%.

The average weekly rent for the month of April 2026 was \$675 (in real\* dollars: a small uptick since February, after trending down since mid-2024; same now as eleven years ago). For the rest of New Zealand, the figure was \$581: 1% lower than March 2026 (but highly seasonal); 2% below a year ago; falling since 2024; the lowest April rent in six years. "Real rent" changes are relative to CPI inflation, so a similar "real" level means rents rose at a similar rate to inflation.

The real\* value of imports by Auckland seaports for the year ended May 2026 was \$33.1 billion: slowly rising 8% since October 2024, still 4% below April 2023, but 23% higher than the 2020 Covid trough. For the rest of New Zealand, the figure was \$33.4 billion: a sudden 3% uptick to the highest since January 2024, but 21% lower than their 2023 post-Covid rebound peak. Auckland has mostly been half the New Zealand total since 2018; previously it was mostly more than half.

\* Real GDP refers to GDP in constant 2024 dollars, to remove inflation.

Lockdowns due to Covid-19 affect results for 2020 onwards. Covid-19 lockdown level 3 began on 23 March 2020.

Latest and historical real GDP figures are modelled estimates, and subject to revision.

Source: Infometrics, Regional Economic Profile/Quarterly Economic Monitor.

\* Real retail sales have been calculated by converting previous quarters' dollars to the latest quarter's equivalent dollars using the quarterly consumer price index (CPI), to remove inflation.

Note: These figures exclude non-retail activity captured elsewhere in the retail sales survey.

Source: Stats NZ, Retail Sales (quarterly); Stats NZ, CPI (quarterly); Auckland Council calculations.

\* Real rents have been calculated by converting previous quarters' dollars to the latest quarter's equivalent dollars using the quarterly consumer price index (CPI), to remove inflation.

Note: Dwelling size and quality may vary over time. Rent is for new rental bonds lodged each month with Ministry of Business, Innovation and Employment, for housing tenancies with private sector landlords (so excludes state housing). Data covers only new bonds, so excludes existing leases from earlier periods whose rent has not changed, or has changed but with no revision to the bond. It also excludes new leases where no bond is lodged. Data is subject to minor revisions.

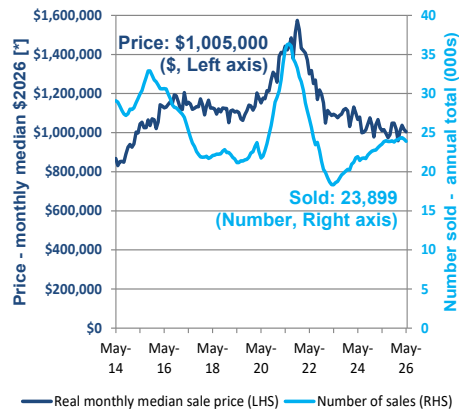

Source: Ministry of Business, Innovation and Employment, Regional Rental Prices (monthly); Stats NZ, CPI (quarterly); Auckland Council calculations.

\* Real import values have been calculated by converting previous quarters' dollars to the latest quarter's equivalent dollars using the quarterly consumer price index (CPI) for tradables, to remove inflation

Note: Import values are cost including freight (CIF). Auckland seaports consist of Port of Auckland on the Waitemata Harbour near the CBD, and Port of Onehunga on the Manukau Harbour (domestic only, no imports); both are owned by Ports of Auckland Limited (POAL).

Source: Stats NZ, Overseas Cargo Statistics-imports-value \$ CIF (monthly); Stats NZ, CPI Tradables (quarterly); Auckland Council calculations.

### House sales: price and number sold

The median (not average) sale price of houses sold in Auckland in the month of May 2026 was \$1,005,000 (in real\* dollars: 1% below last month; same as a year ago; slight downtrend the last three years; 36% below the 2021 peak; similar to eleven years ago).

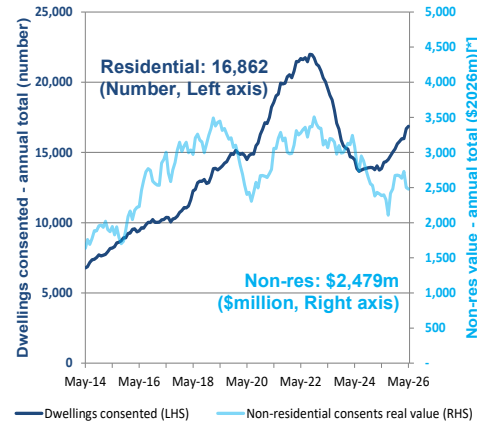

The total number of houses sold in Auckland in the year ended May 2026 was 23,899: 1% fall in a month; flat since June 2025; rising 30% since the May 2023 trough; 34% below the 2021 peak; above mid-2017 to mid-2020.

\* 'Real' prices for previous months are calculated by inflating previous quarters' dollars to the latest quarter's equivalent dollars, using the quarterly consumer price index (CPI).

Notes: The data for 'houses' covers actual sales during the period. Size and quality may vary over time. 'Houses' includes all dwelling types (eg apartments and flats), not just free-standing houses, but excludes sales of undeveloped land. 'Price' is real\* actual sale price (not just listed). REINZ revises recent data each month for numbers sold (usually slightly upwards) and prices.

Source: Real Estate Institute of New Zealand (REINZ), Monthly Property Report (monthly – from website); Stats NZ, CPI (quarterly); Auckland Council calculations.

### Buildings consented

The total number of new dwellings consented in Auckland in the year ended May 2026 was 16,862: 1% above April, and rising strongly by 22% in a year; 23% below the September 2022 peak; 11% above 2019's pre-Covid trough.

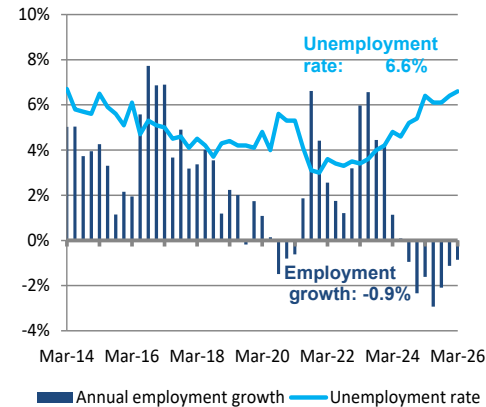

The real\* value of new non-residential buildings consented in Auckland in the year ended May 2026 was \$2,479 million: 1% below April; 18% above August's trough; 4% above a year ago; 29% below 2022 and 2019 peaks; 8% above the 2020 trough.

\* 'Real' values for previous months have been calculated by inflating previous quarters' dollars to the latest quarter's equivalent dollars, using the capital goods price index (CGPI) for non-residential buildings

Note: Projects consented are not necessarily commenced or completed. "New" refers to new buildings (i.e. excludes alterations and additions). Residential number is new dwellings consented, which will exceed new residential buildings as some buildings have multiple dwellings; similarly, it will differ from new residential building consents issued, as some consents are for multiple buildings.

Source: Stats NZ, Building Consents (monthly); Stats NZ, CGPI (quarterly); Auckland Council calculations.

### Employment and unemployment

The number of people employed in Auckland in the quarter ended March 2026 was 0.9% lower than in March 2025 quarter: the seventh quarter in a row of negative annual growth; the fourth quarter in a row of less negativity; but among the worst since 2009-2010 post-GFC.

The unemployment rate in Auckland in the March 2026 quarter was 6.6%: mostly rising since 2023; double the 2021 trough; the highest since 2014; similar to most of 2011 to 2015, only 1.5% below the 2010 peak (8.1%).

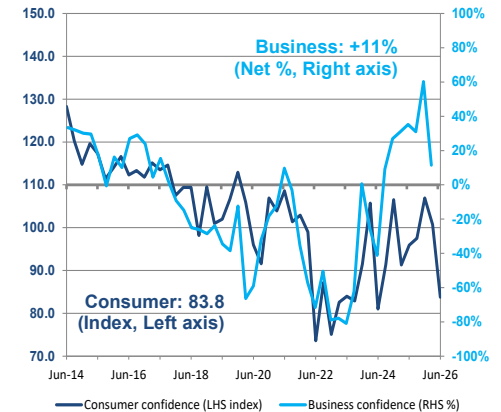

Note: Covid-19 lockdowns began on 23 March 2020, plus wage subsidies, which both affect official employment and unemployment.

Employment data is rebased by Stats NZ each quarter to match latest revisions of historic population estimates.

Both datasets are from a survey (HLFS) so are subject to error margins. Respondents define their own employment status. The survey covers all people aged 15+, so includes school pupils 15+ and people over 65, who might or might not have - or be actively seeking - a job.

Source: Stats NZ, Household Labour Force Survey (HLFS) (quarterly).

### Confidence indicators

The Westpac McDermott Miller Consumer Confidence Index for the June 2026 quarter was 83.8: continuing last quarter's fall; one of the lowest ever; fluctuating wildly since 2023.

The NZIER QSBO in Auckland for the March 2026 quarter showed a net 11% of businesses expecting the general business situation to improve over the next three months: a sharp drop; lowest since 2024; above 2017 to 2024; note that "improve" can include "be bad, but less bad than now".

Note: Left axis is for CCI (consumers: index). For the CCI, a score of greater than 100 shows more optimism than pessimism. Re-scaled 18/9/2024.

Right axis is for QSBO (businesses: net %). The QSBO calculates a net figure as (% of businesses expecting an improvement) minus (% expecting a worsening). QSBO data used here is not the seasonally adjusted version.

Source: Westpac McDermott Miller, Regional Consumer Confidence Index (CCI) (quarterly – published, but proprietary); New Zealand Institute of Economic Research (NZIER), Quarterly Survey of Business Opinion (QSBO) (quarterly – by subscription).
